
ASSIGNMENT 2

Q. Implement the following Scenario in Docker

1. Create a Dockerfile
2. Pull an Ubuntu image in it.
3. Install python in it.
4. Echo a message "Hello Python"
5. Install Nginx server in it.
6. Build an image of this Dockerfile named as "your roll number"
7. Push that image on Docker Hub
8. Pull that image from Docker Hub
9. Run a container from this image
10. Create volume MyDvol for this container.
11. Create a file in this volume with a text message "Hello MyDvol"

Take screenshot of all steps performed in a word file and upload your file on blackboard.
